Energy deposition and penetration of a 130 MeV proton beam in epoxy resin. The relative output of the ionization chamber of a 130 MeV proton beam is compared with the response of a tissue-equivalent proportional counter and with the response of an ionization chamber with a thick window. It is shown that the output of the ionization chamber is highly sensitive to the variation of the phantom thickness for relatively thick phantoms. In addition, the effect of the variation of the composition of the phantom material on the energy deposition and effective density of the phantom is studied. The range of the main component of the composite materials used in these tests (epoxy resin) is found to be significantly less than that of water or the other materials used in previous studies. It is concluded that the ionization chamber may be used as a dosimeter with a spatial resolution of 1 cm or less.

The Protein-free Brain: Harvard Genetics Shows Link Between Genes, Food - prostoalex ===== whyenot _ "The results of Metabolomix and the Genome-based dietary index show that some chemical component present in soybeans, for instance, could be a powerful alternative to protein in keeping people healthy," says researcher Dan Bouly, the paper's lead author. Protein, he notes, is a "good thing", at least from a nutritional viewpoint. "But soybeans are a complicated food," says Bouly, a postdoctoral fellow at The George Washington University School of Medicine and Health Sciences. "We shouldn't just focus on one piece of it." _ ~~~ lutorm The results of Metabolomix and the Genome-based dietary index show that some chemical component present in wheat germ, for instance, could be a powerful alternative to protein in keeping people healthy, at least for bodybuilders. Protein, he notes, is a "good thing", at least from a nutritional viewpoint. "But wheat germ is a complicated food," says... a... scientist.
