Records: 1, Memory: 7,000,000, CPU: 4,500,000. Atlantis Data Space Analyser (ADSA) is a stand-alone application that can be installed or run from an existing SQL Server Express installation. ADSA is specially created for database administrators and SQL Server BI developers to analyse the most important aspect of database servers: their data space requirements. It's a very useful tool, it's not only a graphic environment to work with, but also includes solutions for many common questions: What is the data space used by each table? What is the index space used by each index? What is the data space used by each stored procedure? What is the disk space used by each database? What is the row space used by each table and index? What is the data used by each data type? What is the script space used by a given script? ADSA offers an easy-to-use interface that will help you quickly get information on the data space requirements for your database and database server by either displaying a table with a group of charts or show a chart showing an individual object's space usage. How to use ADSA ADSA is very easy to use, select a database, tables, indexes, stored procedures or views you want to see and click on the respective buttons. It will retrieve data on the usage of all these objects from any version of the database. You will get a beautiful, interactive chart on the screen. Its interface is very simple and easy to use: Connect to your database and click on the "SELECT" button. Select your database, tables, indexes, stored procedures or views on which you want to see usage. Select the charts tab. Click on the chart you want to see. ADSA has the following features: Highly configurable. Highly extensible, you can add any chart (that you could possibly need). Charts are configured by a JSON format file. Possible to query data by a SQL script. Option to display data by namespace (i.e. schema) or by object (i.e. table). ADSA offers a lot of reports that can help you quickly get the information you need. Option to see all objects (i.e. database, database object, database properties, schema, tables, indexes, procedures and
