### AutoCAD Crack + Keygen Full Version [March-2022]

AutoCAD Cracked 2022 Latest Version offers basic and advanced drafting and designing tools and features. In addition to the usual drawing features, AutoCAD includes features such as 3D graphics, spline curves, and fillets. It is integrated with Autodesk 3ds Max and other products. Its Extensible Application Markup Language (XML) file format allows third party developers to add functionality or extra applications to the software. Despite the name, AutoCAD is not part of Autodesk's Autodesk Inventor product line, which offers a similar application for digital prototyping and mechanical design and simulation. The software is also not part of the consumer desktop CAD product Autodesk Fusion 360. ITD (Intelligent Design) support: Since AutoCAD 2008, AutoCAD support the ITD (Intelligent Tree Data) and IFC (Intelligent Feature Class) technologies, which allow the creation of two-dimensional and three-dimensional computer-generated visualizations of large, complex, or dynamic information models. License Autodesk is available in the United States as a stand-alone product. The software is licensed by subscription, perpetual license, or a perpetual license allowing multiple concurrent installations. The software can be downloaded as an installer or as a CD or DVD, or provided on a cloud storage service such as Dropbox, OneDrive, Google Drive or Amazon Cloud Drive. In 2009, Autodesk launched an online store for subscription and perpetual license purchases, including the standard version of AutoCAD, which includes version 2012 and 2013, but not 2016. Many licensing features may be managed online and/or through the Windows interface. In 2016, Autodesk retired all earlier versions of AutoCAD after over 20 years of continuous development. These versions are no longer available for purchase and are no longer supported by Autodesk. Users may continue to use the software for personal and business purposes until the software support ends. History AutoCAD was originally called "Lyon CAD." The name was changed in March 1984 to Autodesk, an anagram of "Lyon CAD". The name "Autodesk" is formed from the names of the founders of the company and of the founders of Autocad Corporation, whose name was adopted in the 1980s when Autocad began to lose market share to the rival program. The original software, called "AutoCAD" was an inexpensive product, originally priced at US\$295 in 1984. By late 1985, the company claimed a share of 5% of the US CAD market. In 1987, the software was licensed for use on the Macintosh. In 1988, Autodesk was purchased by a consortium of investors that included (among others) Allen Group (a former member of the CAD Software User Group) and NCR Corporation (at that time a major supplier of mainframes). Following the acquisition, Autodesk released a redesigned version of the software. AutoCAD '90 was the first version to support true Windows-based operation. This caused problems with compatibility with older Windows machines, which could not use the operating system driver created by Autodesk. To overcome this problem, Autodesk released a "comp 1d647c40b

Alcoa to slash 12,000 jobs worldwide 12 August 2010 Alcoa on Monday announced it would slash 12,000 jobs worldwide and phase out aluminum for automotive customers, reflecting a long-awaited move by the world's largest aluminum maker to focus its efforts on building airframes and appliances and to reduce its dependence on the auto industry. Alcoa (AA) said in an e-mail to employees that it is cutting "strategic investments" in the Americas, Europe, the Middle East, Africa and Asia and that the reductions will come in the third and fourth quarters of this year and are "part of Alcoa's ongoing transformation to strengthen the company's competitiveness" in these regions. While the cuts won't represent a total loss of jobs, they come at a time of prolonged global economic contraction and high unemployment. The company currently has 70,000 employees globally. Alcoa said it will streamline its product portfolio to focus on the airframes and appliances markets, and it will also accelerate production at its only integrated aluminum plant in Cleveland to help reduce the company's debt. Alcoa said the cuts will result in \$700 million to \$1 billion in annualized savings, and it will allow the company to spend \$2.1 billion to \$2.4 billion on capital expenditures in the remaining part of the year. Alcoa said the layoffs will affect the 25,000 employees in Cleveland and 11,000 in another plant in Catawba, N.C. The company will also "work with all employees impacted to minimize any job changes or layoffs," it said. The company's press release doesn't specify where the cuts are being made. On Monday morning, Alcoa's shares closed down 2.4% at \$12.32, and after hours shares were down more than 4%. The news comes on the heels of a similar announcement by Dow Chemical (DOW) last week, in which the company said it would cut 1,200 positions in Europe and the United States in a bid to cut costs. Dow, which has 26,000 employees in North America, also said that it expects to close a plant in Detroit, terminate manufacturing lines and lay off about 1,000 employees.
