The earliest version of AutoCAD was published in 1982 as a desktop app for microcomputers that included a proprietary graphics engine. Like many CAD programs that came after it, the first version of AutoCAD was tied to a specific machine, the Intel 8080 microprocessor. The program was called "AutoCAD" because the graphics for the drawings were generated with the Intel's proprietary graphics chip. The name AutoCAD stuck with the program as it was ported to computers with more powerful graphics chips. AutoCAD was one of the first CAD programs released in the 1980s. It soon became the leading commercial CAD software program in the world. The first versions of AutoCAD were released in 1982 as a desktop app that included the proprietary graphics chip, which is not compatible with standard graphic controllers. It used proprietary software, so it was not compatible with all the standard graphic controllers on the market. AutoCAD used the Intel 8080 processor. The first version of AutoCAD (known as AutoCAD R1) was released in November 1982 for the Apple II computer. Its first Macintosh version (AutoCAD R2) came in 1984. AutoCAD R3 came out in 1989, including the landmark features of parametric drawing and dimensioning, object snap, double snap, the merge command, and the ability to build a drawing from a collection of views. The merge command enables you to add parts of an object to a drawing, and the double snap option allows you to draw a line or curve where two lines or curves intersect. In 1992, version 4 of AutoCAD (known as AutoCAD R4) was released. AutoCAD R4 enabled native drawing, object links, and the drafting

McCarley suffers from a “communication disability,” the complaint explains, which makes it “extremely difficult for him to access and navigate the Internet.” McCarley, the complaint states, uses the iPhone as the only device that will connect to his high-speed wireless data service, and relies on a data plan for his mobile phone service. The suit names AT&T, T-Mobile, Sprint, Verizon, and MetroPCS as defendants, and it seeks \$9.5 million in damages. McCarley is seeking to recover the \$9.5 million in cell-phone service, a new phone, and an iPad. In the complaint, McCarley says that the wireless carriers “have acted in bad faith and have breached the contracts,” because they “have, without authority, breached the contract by (i) selling and providing a lower-speed cellular service than that which was contracted for by Plaintiff; (ii) failing to adhere to the stated terms and conditions of
