A file renamer would come in handy for users who have a large selection of items and need to rename either all of them or specific ones. Of course, a file renamed without the batch/bulk function would be completely useless, as singular files can easily be rebranded using the context menu. File Rename Software is a neat app that can handle all your bulk renaming tasks in no time. To start creating a list with all the items you need to rename, you have to focus on the second part of the UI, mainly, the select files button. The Select Files button is actually a drop-down menu that offers you more ways of loading files in. Depending on your needs, you can import in one file at a time, an entire folder, or specific subfolders. Furthermore, the drag and drop function is also active, so you can directly drop your files from any system location. Renaming options The renaming options are kind of the backbone of this app. These options show us that this app is capable of more than a basic, text replacement file rename procedure. By using File Renamer, you can adjust the space between words, change the (letter) case, delete or insert text, edit MP3 tags, and modify the file extension. Also, if you don't want to mess with file extensions, you can always check the Skip file extension box, which will instruct the app to ignore any text that comes after the dot. Preview the filename before renaming A cool feature that comes with this program is the ability to view the changes in real-time. For example, if you opt to replace only a word in the file name, the app will hide the one you want to cut and will show you the final result with the new word attached. This way, you can make sure you won't repeat the process in case you make a mistake or change your mind. isimsoftware 8.6.0.1 (x64) Free Download File RENAME SOFTWARE No Description.indd File RENAME SOFTWARE No Description
