To review the evidence regarding the impact of smartphone use on asthma. The English literature (2000-2017) was searched through EBSCO, Medline, ProQuest, and Cochrane Library for relevant studies on asthma and smartphone use. Seventeen studies were included. Eleven studies reported beneficial impact of smartphone use (sales, symptom score, and medication adherence). Three studies reported harmful impact on asthma control. These studies were conducted among adolescents and elderly adults, the former of whom already are considered at risk of overuse. On the basis of this review, consumers who have been identified as being at risk of overuse (ie, elderly adults or adolescents) would benefit from reducing smartphone usage, particularly for indoor air quality. Those at increased risk of underuse (ie, individuals diagnosed with asthma) should be educated on the health hazards of smartphone use. Further large-scale prospective studies are warranted to better understand the impact of smartphone use on asthma control, particularly in the younger population.The present invention relates to a power semiconductor module for high-speed switching, and more particularly to a power semiconductor module used as a semiconductor rectifier module, an inverter module, a power supply circuit, or the like in an electric and electronic apparatus such as a mobile phone.
