KEYMACRO is an easy to use replacement for MSCOMCTL.OCX, an ActiveX component which controls the Windows Menu. This component will allow you to display the Windows menu directly on any active window, including your desktop. It will also allow you to configure and create your own "Context Menus". This is a true context menu for all of your applications. KEYMACRO is especially useful for programmers that would like to have a menu bar on their applications. KEYMACRO provides a multi language interface and completely compiles from source. The Project Home Page: The Solution Page: File description: Internet Explorer forms mini-menu in a row. It is still a bit of a bulky form to handle. Internet Explorer gives a basic interface to create its own Internet menu. The menu can be customized in various ways, from customizing its look to providing a different functionality than the Internet options. The mini-menu gives a whole new meaning to the term "toolbar", it's much more useful and intuitive than the traditional Internet toolbars. The Mini-menu is perfect for experienced users who want to create their own mini-menus. For example, you can have access to several mini-menus, one per Internet Explorer window. There are three main elements of the mini-menu: menu items, menu backgrounds and menu separators. Each element has properties that can be customized. 1. Menus Menu items are the basic objects. They define the content and the functionality of a menu. Menus may include a menu item for opening a file, or a menu item for displaying a new window. They are also responsible for handling the click event. Each menu item can have a unique icon, a title, a click event, an activation method (OpenFile, NewWindow, StartUp, NewTab) and a general purpose string to show in the menu bar. It may also have a tooltip which appears when the mouse cursor hovers over the item. Menu item properties: Title Title is the title of the menu item. It is displayed in the menu bar when the menu is shown. Activation Method Activ 1d6a3396d6
