Oct 5, 2018 As users are constantly connected to their devices, it is vital that they know their passwords and their device's PIN. Microsoft Lumia 750 users can now set up a PIN for quick retrieval of their Windows mobile device. A similar feature is available on Blackberry Z10 and a few other

devices as well. Some of the security features of the smartphone include:

- The phone is locked by default. When a user attempts to lock the phone by sliding the slide-up lock button, the warning-lights comes on and that kind of prevents any unwanted activity.
- Has an excellent memory. Most of the

store usernames and passwords in text files on their desktop or in their computers' registry files. This is how hackers can compromise the usernames and passwords of other users. To prevent such things, Microsoft has introduced Windows Password Reset.

Windows Password Reset allows a user to reset the

lost, forgotten, or forgotten-by-themselves password in just a few seconds. Windows Password Reset also ensures the user's privacy. It does not require the user to store their username and password, and it also does not store them in the computer. This makes it hard for anyone to steal any

information from the user. Aug 30, 2014
Windows Password Reset can be used in a computer which is still under warranty. The user first has to download the Windows Password Reset software and then open the Windows Password Reset program. With the program, the user can create a
