In AutoCAD 2009, the 2006 model was enhanced with a whole new programming language (AutoLISP) and a new architecture called Client Server that performs better than before. AutoCAD is often considered the best software for architectural and engineering design. The first version of AutoCAD, released in 1983, was for DOS and the Apple II. AutoCAD for DOS (and other DOS-based programs such as AutoCAD LT) had an important predecessor called "AutoSketch", which came with the "Acorn" operating system. AutoCAD was later developed for the Macintosh and Unix platforms. The GUI was introduced in AutoCAD 1984. The original Mac version was released as a "limited release". Features of AutoCAD 2009 In addition to architectural and engineering design, AutoCAD 2009 has many more built-in functions than its predecessors. A brand-new feature, the "Insert" function, allows users to automatically insert lines and shapes into another drawing. Similar features are available for the Move, Copy, and Delete commands. A new "Change" menu item makes it easier to change the current coordinate system. New AutoCAD features include: Drafting area: The new "Drafting Area" feature in the drawing pane can be used to create a working area for the first time. A "Drafting Area" can be set to any orientation and size, and it can be used with both current and future drawings. Image Capture (or Stenciling): AutoCAD 2009 introduced a new "Image Capture" feature that allows you to create a new drawing by scanning existing drawings or documents. A scanned drawing can be stored as a "Stencil" on disk, or can be captured as a separate image. The captured image can be "opened" directly in AutoCAD and used to create any shape. For example, a scanned copy of an architectural drawing can be used as a stamp to create a model. Image Capture has been made available in all AutoCAD versions from AutoCAD 2003 to AutoCAD 2009. The "Stencil" is also available in most AutoCAD versions, but it works only with AutoCAD 2009. Live View: Live View was first introduced in the AutoCAD 2005. Live View is a combination of an on-screen display (OSD) and a user interface (UI). AutoCAD Live View is used to update a drawing without closing the current drawing

For business related users, AutoCAD is often used for exporting CAD drawings to various multimedia formats (PDF, PNG, TIF) as well as AutoCAD DWG and other CAD file formats for use with other software. Often, the drawing is exported as a PDF file, though it can be any supported format. Users of Autodesk technology can export a drawing to a PDF file directly from the Windows operating system. A free utility named PDF Assist for AutoCAD is available on the AutoCAD website that can be used to export to PDF. Other popular conversion formats include PDF/A-1a, PDF/A-2, PDF/UA, JDF and JPG/JPEG. Some companies use DrawExporter, a plug-in for Microsoft Office Visio, to export their Visio drawings to AutoCAD. There are also several programs that can be used to print the drawings. AutoCAD is included in the Autodesk Desktop Publishing Suite which includes a free program named AutoCAD DWG to PDF. Autodesk also provides a program called Annotation (formerly called Drawdox) to allow users to draw directly on a PDF file. A data exchange format (DXF) is supported by AutoCAD. DXF is one of the primary CAD file formats used by CAD software and is used to exchange AutoCAD DWG files with other CAD software products. There are two main methods of importing CAD files into Autodesk AutoCAD, either by using the Import command or by using the Import utility. AutoCAD also exports DWG files. Autodesk AutoCAD does not support viewing the contents of drawings through the standard Windows Explorer. AutoCAD products The following table shows a comparison of the capabilities of each software product: A list of the main products is given below. License The license for Autodesk AutoCAD 2016 and all other AutoCAD products, including the large drawing capacity and the greater functional capabilities, comes with an annual maintenance fee. The maintenance fee for AutoCAD for use on a single computer is $899. For use on more than one computer it is $1699. These fees are in addition to the purchase price. The use of Autodesk AutoCAD for production is also covered by a patent fee. A perpetual license for the entire AutoCAD product line for a single user is a one-time payment a1d647c40b
