Rheinmetall is an international company based in Düsseldorf, Germany, and is one of Europe's leading producers of heavy armored combat vehicles, surveillance systems, mobility solutions for emergency services, and custom-built products for governments and corporations. Rheinmetall Performance Engine Technologies, an in-house facility that focuses exclusively on the design, research, and development of performance engines for commercial vehicles and extreme performance applications, will team with Porsche to produce the new supercharged 3.0-liter twin-turbocharged V-8 engine in Stuttgart-Zuffenhausen. Rheinmetall builds an advanced version of the 991.2 with a new, highly efficient twin-turbocharged V-8 engine that is highly efficient and environmentally friendly. Credit: Rheinmetall The new engine has a displacement of 3,0 liters and is a direct descendant of the best engine ever built by Porsche, the 3.6-liter flat-six used for the 991.2. The 5.2-liter (376-horsepower) version of the newly developed, twin-turbocharged V-8 powertrain features a twin-scroll turbocharger, a variable turbine geometry turbocharger, a highly efficient combustion chamber design, advanced fuel injection, and an integrated starter generator. The direct injection was developed specifically for the engine. The new engine also features a variable valve timing mechanism and an advanced twin-scroll intercooler. The resulting peak output is 399 hp (302 kW) and 520 lb-ft of torque. The 991.2 has been reworked to facilitate conversion to the Porsche 991.2 RS 2. This includes a performance bumper, reshaped fenders, a fixed rear wing, larger brakes, and reworked Michelin® tires. Rheinmetall Performance Engine Technologies employs a large team of engineers and technicians who use computer-aided engineering systems to handle the design and f30f4ceada
