Time for a cropping and resizing Before creating the next image, it's best to take a look at your composition and decide whether you need to crop or resize it. Crop an image to keep only the important part of the subject and to ensure that the subject fits in the frame. Select the Crop tool (the red rectangle), as shown in Figure 2-3. Figure 2-3: Use the Crop tool to remove any unwanted elements or to resize and fit an image to the overall picture. In Figure 2-3, the window shows the crop selection, which is positioned by the crosshairs. The crop selection fills the area in the green box. You can't resize an image to fit a specific size. However, you can either stretch or compress an image to fit the desired proportions. You may have had the experience of trying to fit an image of a full-length person onto a thumbnail and in the end, you may have spent a great deal of time trying to figure out why the image is distorted. After all, your intentions were good. It's best to manually crop rather than distort the composition. Using the Crop tool to resize is much more difficult because you are changing the proportions of the image at the same time you are increasing or decreasing the size of the image. You can experiment and see what each of those two approaches have done to the image, but you should understand that cropping is the most effective way to resize an image.

The History Brush tool allows you to select an object in an image, press the Alt button to pop up the History panel, and select the clone pixel history brush. Click and drag to paint on the image and the fill color of the pixel history remains. You can also use the History panel to clone pixels from an object or area and paste it on another area in your image. The Pen Tool is a brush tool that allows you to paint on an image. Use the left or right arrows to move the paint tool around the image. The up and down arrows allow you to resize the paint tool to fit your image. The smaller the brush size the smaller the area that you can paint. In addition, you can paint the brush on a different layer. This allows you to paint around an object to paint and erase it cleanly. The Pencil tool is another tool that is similar to the pencil tool. It paints on the same layer you are editing. The Magic Wand tool allows you to select a color or range of colors in an image with a single click. The tool also allows you to select similar colors that you find within an image. Q: How to convert an ArrayList to an array? I have a simple "list" which is an ArrayList. I need to put elements from this ArrayList into an array but I don't know how. I have tried everything like creating a new array of the same type (same variable type) but they have the same size, and I also tried to use the method Arrays.copyOfOf() but it returns an Object[] instead of a type "array". Any help would be appreciated. A: Java 8: Using a Stream: List list =...; String[] array = list.stream().map(String::valueOf).toArray(String[]::new); Using IntStream and Arrays: List list =...; String[] array = Arrays.stream(list).mapToObj(String::valueOf).toArray(String[]::new); Java 7: Using an Iterator: List list =...; String[] array = new String[list.size()]; list.forEach(i -> array[i] = list.get(i)); Using an Iterator and Collections.checkedArrayList: List list =...; String[] array = new String[list.size()]; Iterator it = list.iterator(); while (it.hasNext()) { array[it.nextIndex()] = it.next(); } Using an Iterator and Arrays.copyOfRange: List list =...; String[] array = new String[list.size()]; for (int i = 0; i list =...; String[] array = new String[list.size()]; Iterator it = list.iterator(); while (it.hasNext()) { array[it.nextIndex()] = it.next(); } Using an Iterator and Arrays.asList: List list =...; String[] array = Arrays.asList(list.toArray(new String[0])
